

Agile Business Analysis

Course ISI-1562

Two days

Instructor-led

Introduction

This course provides essential information for business analysts to be successful on agile projects. Attendees will learn how to define the project's vision, model user roles, write user stories and acceptance criteria, prioritize the user stories, refine the stories in preparation for developing them and utilize user stories to plan releases and iterations.

This course is based on the Agile Extension to the BABOK® Guide and will help prepare you for IIBA®'s Agile Analysis certification.

At Course Completion

The objectives of the workshop are to introduce skills, concepts and strategies to enable students to do the following:

- How to write a vision statement
- How to identify and describe user roles and personas
- How to write effective user stories and write acceptance criteria for user stories
- How to manage changes to the Product Backlog
- How to use models to get user stories ready for development
- How to use low fidelity prototypes
- How to create a user story map to aid the prioritization of stories for iterations and releases
- Planning with user stories

Prerequisites

Who Should Enroll:

- Current and aspiring business analysts
- Executives and managers
- Project managers

Course Outline

Topics Include:

- How agile values affect business analysis
