

Tableau Desktop Level 2

Course ISI-1472B 2 Days Instructor-led, Hands-on

Course Description

The advent of cloud computing and storage has ushered in the era of big data. With the abundance of computational power and storage, organizations and employees with many different roles and responsibilities can benefit from analyzing data to find timely insights and gain a competitive advantage.

Data-backed visualizations allow anyone to explore, analyze, and report insights and trends from data. Tableau® software is designed for this purpose. Tableau was built to connect to a wide range of data sources and allows users to quickly create visualizations of connected data to gain insights, show trends, and create reports. Beyond the fundamental capabilities of creating data-driven visualizations, Tableau allows users to manipulate data with calculations to show insights, make visualizations interactive, and perform statistical analysis. This gives users the ability to create and share data-driven insights with peers, executives, and clients.

Tableau is a revolutionary toolkit that lets you simply and effectively create high quality data visualizations.

In this two-day, instructor-led course, students will learn how to make the most of Tableau by connecting to various data sources and create different types of visualizations, including stacked bar charts, scatter plots and maps. You'll also learn about customizing Tableau's default settings for visualizations.

You'll find this course useful if you spend a lot of time conducting data analysis and creating reports. Students will learn the exact steps required to generate simple to complex graphics. Whether they are pie charts or box plots, you can create such graphics with ease and confidence; no more searching for scripts or laborious Excel hacks.

This course is designed for professionals in a variety of job roles who are currently using Tableau to perform numerical or general data analysis, visualization, and reporting. They need to provide data visualizations from multiple data sources, or combine data to show comparisons, manipulate data through calculations, create interactive visualizations, or create visualizations that showcase insights from statistical analysis.

This course is also designed for students who plan to obtain Tableau® Desktop Qualified Associate certification, which requires candidates to pass the Desktop Qualified Associate exam. This is not Official Tableau Training.

Course Objectives

In this course, you will perform advanced data visualization and data blending with Tableau. You will:

Contact ISInc for more information at 916.920.1700 or by visiting our website at <http://www.isinc.com>

- Blend data to visualize relationships.
- Join data.
- Access data in PDFs.
- Refine visualizations with sets and parameters.
- Manipulate data with calculations.
- Visualize data with advanced calculations.
- Perform statistical analysis and forecasting.
- Enrich visualizations, dashboards, and maps

Prerequisites

To ensure your success in this course you should have experience with importing data and creating data visualizations in Tableau. You can obtain this level of skill and knowledge by taking the following course ISI-1470B, Introduction to Tableau or have equivalent experience and skills.

Course Outline

Module 1: Blending Data to Visualize Relationships

- Blend Data
- Troubleshoot and Refine Data Blends

Module 2: Joining Data

- Create Joins
- Troubleshoot Joins
- Merge Data with Unions

Module 3: Accessing Data in PDFs

- Connect to PDFs
- Clean Up and Organize PDF Data

Module 4: Refining Visualizations with Sets and Parameters

- Create Sets
- Analyze Data with Sets
- Apply Parameters to Data to Refine Visualizations

Module 5: Manipulating Data with Calculations

- Create Calculated Fields
- Manipulate Data with Functions
- Analyze Data with Table Calculations

Contact ISInc for more information at 916.920.1700 or by visiting our website at <http://www.isinc.com>

Module 6: Visualizing Data with Advanced Calculations

- Create Groups and Bins with Calculations
- Analyze Data with LOD Expressions

Module 7: Performing Statistical Analysis and Forecasting

- Perform Statistical Analysis
- Forecast Data Trends

Module 8: Enriching Visualizations, Dashboards, and Maps

- Customize Mapped Data
- Enhance Visualizations with Tooltips
- Enhance Dashboards with Actions
